

AdvancedTCA TRAINING SERVICES

RadiSys delivers market proven, application-ready, high performance AdvancedTCA (ATCA) hardware and software solutions for today's competitive global communications market. We power more field-deployed 10 Gigabit ATCA systems than any other provider and back our Promentum® ATCA products with long lifecycle support. Additionally, we offer a comprehensive range of training services that can help you maximize your investment through lowered support costs and improved time-to-market.

TRAINING OPTIONS

You can choose standard or customized training programs and also have the option to add engineer-to-engineer and train-the-trainer courses (only available for training given at RadiSys headquarters or onsite).

VARIETY OF FORMATS

RadiSys has designed several formats to meet customer needs. You can choose from:

- ➔ **RADISYS HEADQUARTERS:** Training takes place in a dedicated facility that accommodates classroom and hands-on lab instruction customized to fit your needs.
- ➔ **ONSITE:** A combination of classroom and hands-on lab instruction given by RadiSys expert offers real-world experience in your environment.
- ➔ **REMOTE TRAINING:** Comprehensive, web-based material is ideal as an introductory or refresher course.

KNOWLEDGE SHARING

Due to the complexity of ATCA products, we are committed to ensuring customers become technically proficient. You can rely on RadiSys technical experts to fill the gap that can occur during the new product introduction phase. We have optimized the training program to ensure your technical, budgetary and timetable needs are met.

COURSE CONTENT

The curriculum is a combination of hands-on lab and classroom instruction. This comprehensive, three-day course will give you a keen understanding of our Promentum products and cover categories such as:

- ➔ Product overview
- ➔ Software architecture
- ➔ Debugging methods
- ➔ Booting sequence
- ➔ Blade and platform management
- ➔ Network configuration methods
- ➔ Connecting to external equipment such as Linux Host, Cisco, and external DHCPD

Collaborative lifecycle

RadiSys will provide you with our technical subject matter experts for advice and guide you to resolution—collaborating for success!

RADISYS EXPERTISE

RadiSys has a history of delivering market proven, application-ready ATCA hardware and software solutions. To ensure you can quickly, and cost effectively, integrate our technology into your products, we have groomed a talented technical staff. This team is responsible for delivering effective training programs and continues to refine the materials as technology, and your requirements evolve.

BENEFIT TO CUSTOMERS

Through RadiSys training services you can take advantage of our expert staff and knowledge. The transfer of information and collaboration between our technicians and your staff can help you incorporate ATCA products into designs faster and more efficiently. This can result in lower support costs and improved time-to-market.
